Fax: (330) 375-2275

This report was prepared by the Akron Metropolitan Area Transportation Study (AMATS) in cooperation with the U.S. Department of Transportation, the Ohio Department of Transportation, and the Village, City and County governments of Portage and Summit Counties and the Chippewa and Milton Township areas of Wayne County.

The contents of this report reflect the views of AMATS, which is responsible for the facts and accuracy of the data presented herein. The contents do not necessarily reflect the official view and policies of the Ohio and/or U.S. Department of Transportation. This report does not constitute a standard, specification or regulation.

Introduction

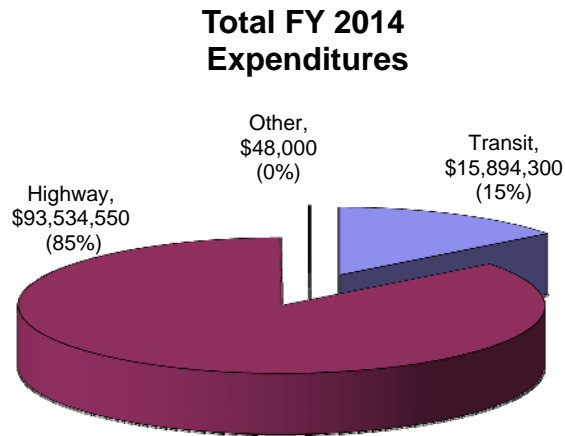

The Moving Ahead for Progress in the 21st Century Act (MAP-21) requires that Metropolitan Planning Organizations (MPO) publish an annual listing of federally obligated projects.

The Federal Highway Administration (FHWA) defines obligation as the federal government's commitment to pay or reimburse an entity for the federal share of a project's eligible cost. Obligation does not necessarily indicate expenditure or project completion; only that the project has been approved by the government for reimbursement.

This report includes the status of all projects listed in the Transportation Improvement Program for FY 2014, which began on July 1, 2013 and ended on June 30, 2014.

Obligation Report

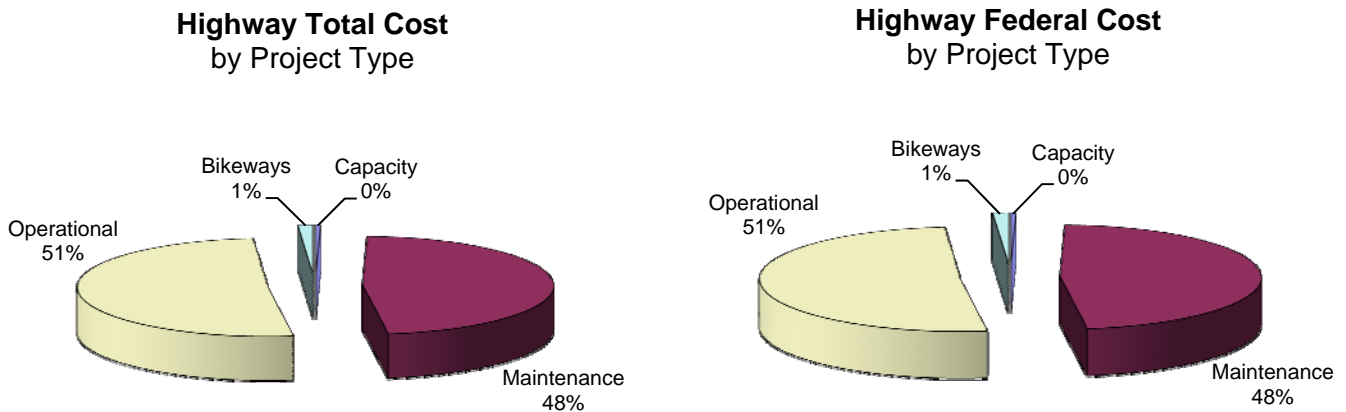

During FY 2014, \$109.5 million was expended on highway and transit projects in the AMATS area. Of this total, \$93.5 million was for highway projects and \$15.9 million for transit projects. The remaining \$48,000 was expended on the AMATS Air Quality Advocacy Program. The following pie chart is a summary of the percentage of total expenditures by mode in the TIP for FY 2014 that includes funding from federal, state and local sources. The Other category indicates the Air Advocacy Program.

Highway Projects

There are several different types of highway projects listed in the TIP. These include capacity, operational, maintenance and bikeway type projects. Capacity projects include constructing new roadways and adding new lanes to existing roadways to accommodate

larger volumes of traffic. In FY 2014, there was \$367,850 (engineering phase only) in capacity type projects scheduled in the TIP. Operational projects include improving the flow of traffic usually by either coordinating traffic signals and/or adding turn lanes. In FY 2014, \$47.6 million was expended for operational improvement projects. Maintenance projects are aimed at preserving the roadways by resurfacing or reconstruction. Maintenance projects accounted for \$44.4 million in FY 2014. Bikeway projects are typically off road facilities. These type of projects amounted to \$1.2 million in FY 2014. The following pie charts show the percentage of expenditures for each project type by total project cost and by federal funding sources only.

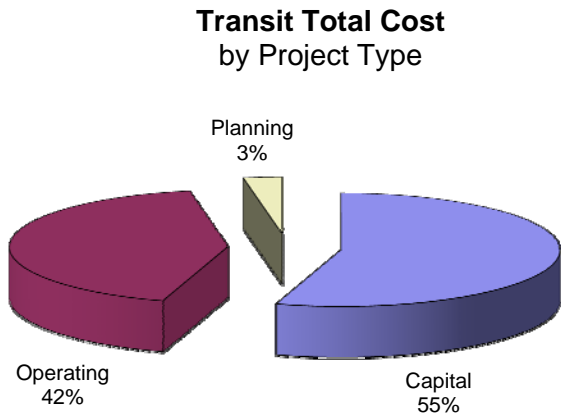

The Highway Project tables, located at the end of this report, are reflective of the various stages of project development that occurred during the course of FY 2014. The tables are divided into projects that began construction, were authorized for preliminary engineering or right-of-way, planning studies authorized or were cancelled or delayed. The tables provide detailed information such as locations and limits, type of work and the amount of federal funds programmed for projects. (Please note that some projects or phases of a project did not have any federal funds programmed and are designated with “N/A.”) The accompanying Highway Projects Map depicts the location of these projects and their status during FY 2014.

Transit Projects

Transit projects are also divided into several different types in the TIP. These include capital, operating and planning type projects. Capital projects include purchasing of equipment, which is typically new buses. In FY 2014, there was \$8.7 million in capital expenditures. Operating expenditures typically include personnel salaries, fuel costs and routine maintenance on buses and facilities. In FY 2014, \$6.7 million was expended for operating type projects. Planning activities are aimed at planning and evaluating transit services. This can include conducting long range and regional transit planning and analysis and measuring of system performance. In FY 2014 \$450,000 was spent on

transit planning activities. The following pie charts show the percentage of expenditures for each project type by total project cost and by federal funding sources only.

The Transit Projects table provides project information such as type of project, the amount of federal funds awarded or programmed and the status of the grant or project in FY 2014.

HIGHWAY PROJECTS THAT BEGAN CONSTRUCTION FY 2014

No.	PID #	PROJECT	LOCATION & TERMINI	TYPE OF WORK	FY 2014 FEDERAL FUNDS
